

# Subtraction Tic-Tac-Toe

Players choose markers in two different colors. The first player chooses two numbers from beneath the game board, places a paper clip on each, and marks the difference with his/her color marker. The second player moves one of the paper clips to a new number, finds the difference, and marks that difference with his/her color marker. Play continues until one player has marked four numbers in a row, a column, or a diagonal. Note: it is legal to move the paper clip to the same number of the other paper clip to allow for doubles such as  $5 - 5$ .
